

NEW WEB BASED AND MOBILE DASHBOARD PRODUCTS ANNOUNCED BY CAPE SYSTEMS

Unique Supply Chain Application Focus

Chicago, Illinois (January 8, 2007) – CAPE Systems Group, Inc., (OTCBB:CYSG) a leading provider of software technology for packaging design, RFID asset tracking, pallet optimization, inventory and warehouse management, supply chain execution and order fulfilment, today announced, from its booth at ProMat 2007 the nation’s largest exhibition of material handling in logistics equipment, systems and technologies sponsored by the Material Handling Industry of America, the release of its new web-based and mobile dashboard products with unique applications for the supply chain.

CAPE’s Online Dashboard and CAPE’s Mobile Dashboard are designed to bring relevant data from the host ERP systems to mobile users and on smart phones, BlackBerry™ devices, PDA’s and other handheld computers in real time, allowing the user to be constantly updated as to events in the chain of supply as they occur.

For corporate executives, these products can provide real time information, as to sales, customers, operations and financial performance whenever the user needs such data, wherever the user is located. For operational executives and associates involved in order fulfillment, logistics and supply chain management, these products can provide real time data and advanced metrics for key performance indicators (KPI) for such items as event management (e.g. inventory shortages, labor issues, delivery/receipt problems), labor standards, scheduling and approvals, as they may occur.

For field operatives, the products provide similar real time data for transaction processing. The dashboard data views are tailored to each user’s role, preferences and profile.

“Increasingly, the biggest challenge of the supply chain today is connecting mobile users with their informational requirements in real time,” comments David Sasson, CAPE’s COO. “By delivering mission critical data to key operatives, within or without the four walls of an enterprise, in real time, conveniently formatted onto BlackBerry™ devices, smart phones, PDA’s or other handheld computers, we can provide up to the minute information for quick action on the fly. This powerful tool can help people collaborate up and down the chain of supply to be most efficient and responsive to their customers’ needs.”

Early adopters of CAPE’s new dashboard products are already on board including several Fortune 500 companies. CAPE is formally exhibiting the new dashboard technology this week at Promat 2007, the largest supply chain, logistics, and material handling event in North America.
