

**NEW PICRITE® ROBOTIC PALLET BUILDING SYSTEM  
ANNOUNCED BY CAPE SYSTEMS**

**\*\*\*New Product Automates Robotic Pallet Building\*\*\***

South Plainfield, New Jersey (January 22, 2007) – CAPE Systems Group, Inc., (OTCBB:CYSG) a leading provider of software technology for packaging design, RFID asset tracking, pallet optimization, inventory and warehouse management, supply chain execution and order fulfilment, today announced the release of its newest software designed to automate robotic pallet building, PicRite® Robotics.

CAPE's PicRite® Robotics product contains a new level of functionality, reliability and ease of use. New features include modules that control order batching and automated outbound palletization, analyze orders to determine and control pallet build, direct robots to pick from proper position and control orientation and layer building. PicRite® Robotics also tracks every case that has been loaded onto pallets to indicate when the pallet has been completed. The product further enables a robot to handle multiple size cases on one pallet, and support interlocking shapes to allow optimal pallet builds. The system can be configured with 3-D graphical views of the pallet, support popular robotic palletizers and seamlessly integrates with the host processing/warehouse management systems.

“We believe that PicRite® Robotics is quite simply the most advanced product in its class and is the result of over 20 years of experience and innovation in pallet building software and working with the major players in the international robotics handling industry,” comments David Sasson, CAPE’s COO.

Early adopters of CAPE’s new PicRite® Robotics are several Fortune 500 companies.
